

The **magnetic limescale protection PURAK** was tested at the Laboratory of Industrial Measurements, University of Cassino, Faculty of Engineering, with Test Report 185/11.

The mineralogical analysis of the precipitates (calcite and aragonite) was performed with X-ray diffraction analysis and showed irrefutably high concentrations of calcite (limestone) in water NOT treated with the **magnetic limescale protection PURAK**, while water treated with the PURAK, contained only very small quantities or virtually no calcite (limestone).

The **magnetic limescale protection PURAK** is constructed in compliance with D.M. 25, and therefore perfectly suitable for water treatment intended for human use. PURAK fully corresponds to EC Directive on electromagnetic compatibility.

PURAK[®]
MAGNETIC LIMESCALE PROTECTION

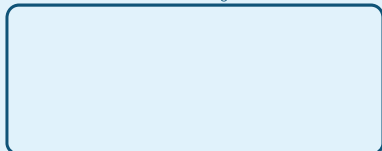

**Best solution for
limesale protection**

MAGNETIC LIMESCALE PROTECTION

BATHROOM AND KITCHEN

Water with low limestone content prevents limescale deposits in the sanitary installations of the bathroom, which require frequent cleaning and maintenance; It is suitable for washing, the clothes remain soft; the washing machine and the dishwasher last longer.

Domestic industrial and commercial

INDUSTRY AND COMMERCE

In steam generator systems, in circuit systems with heat exchanger, for liquid ring pumps. In restaurants and hotels, in dairy and cheese production as well as in all other fields of application where water is used.

HEATING

Water with a low content of limestone is ideal for the hydraulic installations used in homes for heating (furnaces and boilers) and for sanitary use

CARS

Water with a low content of limestone is also ideal for washing cars and any metal surface since it leaves no dull spots on surfaces and after drying.

Installation
